OK SOLAR DATA ON TODAYS CME IS BEING MANIPULATED ON ACE

well, CNN announced this CME missed us, coming in north of us. The ACE DATA is Being manipulated. This is the ACE data for the last 24 hours. [[link to www.swpc.noaa.gov](http://www.swpc.noaa.gov)] Nothing interesting. The storm

PROOF is here at these two linkys. [[link to wdc.kugi.kyoto-u.ac.jp](http://wdc.kugi.kyoto-u.ac.jp)] Now this AE index measures energies coming inside of the magnetosphere to Weather satellites like the GOES satellites. As you see we are getting a significant storm. It was coming inside right about 1500 Utc after it being said it would arrive around 1440 utc.

This means our thugs are also manipulating the AE index data on Nict. [[link to www2.nict.go.jp](http://www2.nict.go.jp)]

The GOES magnetometer is PROOF also we are getting this CME [[link to www.n3kl.org](http://www.n3kl.org)]

Now Look also at haarp: [[link to www.haarp.alaska.edu](http://www.haarp.alaska.edu)] obviously something came in.

Proof also here: [[link to www.bartol.udel.edu](http://www.bartol.udel.edu)] the neutrons are all dropping out hugely, which occurs with these storms.

THEREFORE WHY IN THE FUCK DID THEY CHANGE THEIR WHOLE TUNE ON CNN WITH ALL THE ATTENTION GIVEN. CNN EVEN STATED THE NORTHERN LIGHTS WERE NOT FROM THIS CME THAT "MISSED US".

SOMETHING SMELLS ROTTEN. I HAVE BEEN FEELING THIS STORM AND WAS QUITE PERPLEXED BY THE NO DATA ON ACE FROM IT, PLUS ON AE INDEX ON NICT.

Hello NIP,

well we've been having aurora borealis down here in the south of England... very unusual! we have most definitely been hit by a major amount of radiation today!

I was surprised to see the phenomenon plastered all over the front page of fox news yesterday! and then for them to play it down?... and Venus last night from the UK was like a fire ball in the sky... it was ridiculously large and extraordinary... Lightship or not, it was reacting to something. IMO we will have a delayed reaction to this CME in the form of magma shifting and expanding.

01/24/2012 04:04 PM

Ok here is another source, the SOHO satellite which is not in constant contact, so the missing data will be filled in but it picked up solar winds to 700 and protons to about 15. The Soho satellite is the same distance from earth approximately as ACE but I don't know how far apart they are, the data often differs somewhat but not hugely. around 20 utc the wind was in the 600 range and 10 on the protons. Shame for shame for shame on NASA

Makes me wonder if of the two major msm that reported on this (fox and cnn) one of them went rogue briefly and reported it when they shouldn't have, so the other did also in order to downplay the event.

Cnn downplayed it more than fox did on their webpage so...

Could be to discredit amateur astronomers and sites like this one (with huge followings) in order to downplay not just this event, but future ones as well, because our confidence in ourselves and others to accurately interpret and predict catastrophic natural events would be shaken, lose followers, and bury the whole topic as one "better left to professionals," professionals who say "don't worry, everything is fine, it's normal!"

I think mostly, however, this is about downplaying events to water down any trends we think we see developing in nature, lest we catch on to the big picture and begin to think for ourselves, outside of the box.

Not exactly doom -- more of a nuisance here for me:

Yesterday, about 1:15 pm Eastern time, the electronics in my car freaked out & then it refused to start. This lasted about 30 minutes, then she started right up w/o a problem. It is an SLK series Mercedes, they are not known for being cankankerous, but are indeed full of electronics.

Left my engineer husband scratching his head. Also, our cell phones & broadband were acting up all day yesterday.

Solar related? I am not a solar expert, just wondered if you think the above mentioned problem is related.

Quoting: **Janie Smith**

Posted this on another thread earlier:

Like you said, not sure if it's related, but it is worth mentioning: I'm in CO and almost all of the

stoplights were out in our town. A guy was at one of the stoplights, reset it, was getting in his truck to go down the road and fix the next one when it started going out again. This happened continuously for a while. At the same time, satellite was going down and internet was sketchy. Again, could be coincidental, but figured it might not be, too :)

Quoting: **Nobody in Particular**

It was almost 10 degrees celcius in Buffalo NY yesterday. No snow, which is really weird for this part of the world. Then at night the temperature dropped and it was really, insanely windy.

There is definitely some interaction between solar activity, the Earth's magnetosphere and how it affects weather in at least some parts of the world, particularly North America and Western Europe.

However, that theory doesn't fit too well with CO2=global warming=need for carbon trading or carbon tax, does it?

This is a proof that if something really happens, we'll be the last ones to know about it...

These data manipulation may be occurring since last year and we've been fooled all the time...

Anyway, thanks for the info. I'm a complete snotard and proud of it... 🙌🏻🙌🏻

Epic Thread Fail. News of the coming event was spread far and wide. The CME data was available on other instruments for anyone who cared to look.

Why would you 'manipulate' data that was available on other instruments?

Why would you 'manipulate' data that caused absolutely no harm to anyone?

Fracking Brilliant, NIP.

Changes made to KP index. Solar wind not reporting at all. US Air force data taken offline... during this storm.

Go look at the KP Index.

[\[link to www.solarham.com\]](http://www.solarham.com) Notice above the index. 15 minute interval. Always has been. Now click it full size. It is only being updated every 3 hours.

Next. NOAA no solar wind speed being reported.

Last the USAF has always ALWAYS had an estimated line on the official chart (white) and as measured (blue). The white line is now gone. It was on the chart until roughly 1pm eastern time today. scroll down below the color bar chart.

[\[link to www.solarham.com\]](http://www.solarham.com)

I agree with the OP something is up.

Chad Myers of CNN reported the CME was a direct hit. This just isn't a major storm or a huge deal. He said they are expecting more storms as we get closer to 2013 and the sun can have these storms every 3-4 days.

This particular storm is no big deal, just cool if you live in a place to see the aurora. I live in Oregon and was excited for this BUT it's rainy and cloudy all week so I will miss it just like I miss every meteor shower in this shit state.

well, CNN announced this CME missed us, coming in north of us. The ACE DATA is Being manipulated. This is the ACE data for the last 24 hours. [\[link to www.swpc.noaa.gov\]](http://www.swpc.noaa.gov) Nothing interesting. The storm

PROOF is here at these two linkys. [\[link to wdc.kugi.kyoto-u.ac.jp\]](http://wdc.kugi.kyoto-u.ac.jp) Now this AE index measures energies coming inside of the magnetosphere to Weather satellites like the GOES satellites. As you see we are getting a significant storm. It was coming inside right about 1500 Utc after it being said it would arrive around 1440 utc.

This means our thugs are also manipulating the AE index data on Nict. [\[link to www2.nict.go.jp\]](http://www2.nict.go.jp)

The GOES magnetometer is PROOF also we are getting this CME [\[link to www.n3kl.org\]](http://www.n3kl.org)

Now Look also at haarp: [\[link to www.haarp.alaska.edu\]](http://www.haarp.alaska.edu) obviously something came in.

Proof also here: [\[link to www.bartol.udel.edu\]](http://www.bartol.udel.edu) the neutrons are all dropping out hugely, which occurs with these storms.

THEREFORE WHY IN THE FUCK DID THEY CHANGE THEIR WHOLE TUNE ON CNN WITH ALL THE ATTENTION GIVEN. CNN EVEN STATED THE NORTHERN LIGHTS WERE NOT FROM THIS CME THAT "MISSED US".

SOMETHING SMELLS ROTTEN. I HAVE BEEN FEELING THIS STORM AND WAS QUITE PERPLEXED BY THE NO DATA ON ACE FROM IT, PLUS ON AE INDEX ON NICT.

Quoting: **Nobody in Particular**

Its always been rotten, just gotta sift through the disinfo and misinfo. Weather Channel is saying that the "solar storm" is ongoing! GPS and communications satellites could be affected. Total Electron Count in the Pacific Ocean is very high with several hotspots.

[\[link to iono.jpl.nasa.gov\]](http://iono.jpl.nasa.gov)

Quoting: **Anonymous Coward 9435457**

actually I have checked this nearly daily for a long time now, and itss NOT high. It was until at most a couple weeks ago, running totally RED (80) in that "band" around the globe during sunlight. That it is slightly increased though in one small spot today is probably due to the CME. There was only green (50's) over South America earlier today. The two hotspots you speak of are about 70. In general the TEC was increasing heavily a few months ago and the raised the "red" coloring from 50 to 60 and then to 80.

IF they do, then it will be even worse that suggested here: [[link to wdc.kugi.kyoto-u.ac.jp](http://wdc.kugi.kyoto-u.ac.jp)] which is where i proved they are manipulating ACE. And yes, ACE IS running, JUST way low. When its not running, there is no graph or data, so its NOT down.

as you can see here, they ARE posting data, its just not what is really going on. and I could think

that maybe the satellite was having troubles, except they announced on CNN after tons of hype yesterday and today, that the storm missed us and all those auroras were not from the storm.

Yeah, Fox News is changing their story now too.... Pffft!

"He said a geomagnetic storm Tuesday that came from that solar storm seemed to mostly miss Earth, going a bit north, so it was unlikely that auroras would extend too far south Tuesday night.

Geomagnetic storms cause awesome sights, but they can also bring trouble. According to the National Oceanic and Atmospheric Administration, problems can include current surges in power lines, and interference in the broadcast of radio, TV and telephone signals."

Lets say it takes 3 days to reach us.

Tell us it comes in 24 hours

2 days later we loose power grid globally. Precursors to Iran and put out on the media.

The US military uses the power outage to control the citizens. But even w/o power, a stroy must be made or revolt will happen.

Iran did it.....they never let a good catastrophe go to waste.

Hello NIP,
well we've been having aurora borealis down here in the south of England... very unusual! we have most definitely been hit by a major amount of radiation today!
I was surprised to see the phenomenon plastered all over the front page of fox news yesterday! and then for them to play it down?... and Venus last night from the UK was like a fire ball in the sky... it was ridiculously large and extraordinary... Lightship or not, it was reacting to something. IMO we will have a delayed reaction to this CME in the form of magma shifting and expanding.
Quoting: **jolo 9433281**

Oh which part of southern england did you see this then ?

Quoting: **Bovriltard**

hello BT,
The sky was a pretty green glow looking North just outside Guildford... raining of course but green was the colour of the backlight... most unusual.

WOW!!! Now they are saying it's the largest in almost 9 years! That is certainly NEWS WORTHY... or you would think.

M8.7 Solar Flare and Earth Directed CME

01.23.12

UPDATE 01.24.12: The coronal mass ejection CME collided with Earth's magnetic field a little after 10 AM ET on January 24, 2012. The influx of particles from the CME amplified the solar radiation storm such that it is now considered the largest since October 2003. NOAA's Space Weather Prediction Center has categorized it as a "strong" -- or S3 (with S5 being the highest) -- storm. Solar radiation storms can affect satellite operations and short wave radio propagation, but cannot harm humans on Earth. Auroras may well be visible tonight at higher latitudes such as Michigan and Maine in the U.S., and perhaps even lower.

Interesting Freckles!!! I looked around and found this page just to find out what an M8.7 can do.

[[link to www.wsbt.com](http://www.wsbt.com)]

They can knock out power grids and make cell phones useless. But while he says this storm is big, it's not that big.

"Even though this is the largest storm that we've had in several years, it's still not at the magnitude that it would affect our everyday lives," Howk said. "The biggest impact will be on satellites that are up above the earth's magnetic field."

Howk adds that flight navigation may also be affected, so planes will be flying farther away from the north and south poles where the flares have the most impact.

Hey NIP!

Found this:

[\[link to arkansasmatters.com\]](http://arkansasmatters.com)

Atlanta-based Delta Airlines has re-routed Tuesday transpolar flights as a precaution due to a solar storm hitting the earth today from a flare that was produced on Sunday.

Anthony Black, spokesperson for Delta Airlines tells CNN it affected a 'handful of routes,' four from Asia and four from the United States. Black says the company is in a wait and see mode as far as impacts to Wednesday travel.

Scientists say the outburst from the Sun is covering Earth in the strongest solar-radiation storm in six years.

The "Christian Science Monitor" reports the radiation storm will peak today, possibly triggering a disturbance of Earth's magnetic field.

anyone for microwave popcorn??

well, CNN announced this CME missed us, coming in north of us. The ACE DATA is Being manipulated. This is the ACE data for the last 24 hours. [[link to www.swpc.noaa.gov](http://www.swpc.noaa.gov)] Nothing interesting. The storm

PROOF is here at these two linkys. [[link to wdc.kugi.kyoto-u.ac.jp](http://wdc.kugi.kyoto-u.ac.jp)] Now this AE index measures energies coming inside of the magnetosphere to Weather satellites like the GOES satellites. As you see we are getting a significant storm. It was coming inside right about 1500 Utc after it being said it would arrive around 1440 utc.

This means our thugs are also manipulating the AE index data on Nict. [[link to www2.nict.go.jp](http://www2.nict.go.jp)]

The GOES magnetometer is PROOF also we are getting this CME [[link to www.n3kl.org](http://www.n3kl.org)]

Now Look also at haarp: [[link to www.haarp.alaska.edu](http://www.haarp.alaska.edu)] obviously something came in.

Proof also here: [[link to www.bartol.udel.edu](http://www.bartol.udel.edu)] the neutrons are all dropping out hugely, which occurs with these storms.

THEREFORE WHY IN THE FUCK DID THEY CHANGE THEIR WHOLE TUNE ON CNN WITH ALL THE ATTENTION GIVEN. CNN EVEN STATED THE NORTHERN LIGHTS WERE NOT FROM THIS CME THAT "MISSED US".

SOMETHING SMELLS ROTTEN. I HAVE BEEN FEELING THIS STORM AND WAS QUITE PERPLEXED BY THE NO DATA ON ACE FROM IT, PLUS ON AE INDEX ON NICT.

I know the CME hit, it felt wonderful like the one in September just prior to the quake off vancouver island. Surrounded by guides and positive ideas coming. The geomagnetic storm this weekend, they were expecting it all weekend, and the cyclones that occurred middle of that night, that one was disturbing, kids started fighting and acting up, and I was stressed and got upset. This one is golden light, and lovely. Had another memory come back about the ground crew needing to throw off any chains left on them, raise their frequency to love and kindness because they're going home. And had contact. Apparently the message to raise frequency and kindness, was for those here amongst humanity and for those who had been for a long time watching over, who are feeling kind of frazzled and lower vibed by now.

Also this was a general message, because the ground crew is a particular family, there are many family groups here, and in a sense we're all greater family. Everyone needs to wake up and strive for kindness in all, and throw off the chains and programs.

Everyone... I found this little piece of info and wanted to piggy back on this thread since it was related:

[\[link to www.radiosurvivalist.com\]](http://www.radiosurvivalist.com)

Here is a partial reprint of the NASA article:

May 29, 2009: Solar Cycle 24 will peak, they say, in May 2013 with a below-average number of sunspots... "Even a below-average cycle is capable of producing severe space weather," points out Biesecker. "The great geomagnetic storm of 1859, for instance, occurred during a solar cycle of about the same size we're predicting for 2013."

The 1859 storm--known as the "Carrington Event" after astronomer Richard Carrington who witnessed the instigating solar flare--electrified transmission cables, set fires in telegraph offices, and produced Northern Lights so bright that people could read newspapers by their red and green glow. A recent report by the National Academy of Sciences found that if a similar storm occurred today, it could cause \$1 to 2 trillion in damages to society's high-tech infrastructure and require four to ten years for complete recovery. For comparison, Hurricane Katrina caused "only" \$80 to 125 billion in damage.

Hmmmm it kinda puts the the drills in Las Angelas thread, etc into perspective now.

Very Very good catch, NIP!!! BRAVO!

Hello NIP,

well we've been having aurora borealis down here in the south of England... very unusual! we have most definitely been hit by a major amount of radiation today!

I was surprised to see the phenomenon plastered all over the front page of fox news yesterday! and then for them to play it down?... and Venus last night from the UK was like a fire ball in the sky... it was ridiculously large and extraordinary... Lightship or not, it was reacting to something. IMO we will have a delayed reaction to this CME in the form of magma shifting and expanding.

Quoting: **jolo 9433281**

Re: OK SOLAR DATA ON TODAYS CME IS BEING MANIPULATED ON ACE

Australian Msm

[\[link to www.adelaidenow.com.au\]](http://www.adelaidenow.com.au)

A SOLAR storm is lashing Earth with radiation that disrupts communication and satellite systems, while dazzling polar stargazers.

Last night, plasma from Sunday's solar flare was expected to reach the Earth, **causing problems for computers on satellites and prompting airlines to avoid northern polar routes.**

Radiation from Sunday's flare (2.30pm SA time) arrived at Earth an hour later and has been reaching the surface for three days.

But this coronal mass ejection seemed likely to be only moderate, with a chance for becoming strong, Biesecker said. **Its worst was likely to go north of Earth.**

OK, I've been following the possible CME related earthquake theory, and how the sun affects our behaviour and all the other related topics that go with what a CME does and cannot do etc...

This is the perfect opportunity to monitor what actually does happen. This is one of the biggest CME's we've had for a few years.

I'll personally be watching for

- a) Power failures in a large area or areas
- b) An earthquake over the magnitude of 7.2 and/or greater,
- c) Cyclones, and definately another reacord breaking tornado outbreak especially in the Mid West Region,
- d) If a CME does affect volcanic activiy then we'll also see some elevated increases,
- e) Other unusual high weather related incidences
- f) An increase in violence, higher rage incidences or heated discussions etc...

There is lots of scientific research that suggests all of the above can be triggered by a CME...
...if CME's do affect any of or all of the above, or none, this is the perfect opportunity for ourselves to watch and see if the evidence appears.

Either way, I'll learn from it one way or the other...

Fantastic investigative work by the way **OP**, a great thread.

Quoting: **DMTHC**

It was supposed to be "moderate" then it hit, and they changed it to "STRONG".

M8.7 Solar Flare and Earth Directed CME

UPDATE 01.24.12: The coronal mass ejection CME collided with Earth's magnetic field a little after 10 AM ET on January 24, 2012. The influx of particles from the CME amplified the solar radiation storm such that it is now considered the largest since October 2003. NOAA's Space Weather Prediction Center has categorized it as a "strong" -- or S3 (with S5 being the highest) -- storm. Solar radiation storms can affect satellite operations and short wave radio propagation, but cannot harm humans on Earth. Auroras may well be visible tonight at higher latitudes such as Michigan and Maine in the U.S., and perhaps even lower.

All this fuzz about this "cool nothern lights" that appered early monday morning up here.... yes we had some MAGNIFICENT nothern lights bathing our skies up here monday morning 3 am lokcal time.

So was this a "grab this phenomena and pull this stunt and have evidence for it (albeit 24 hours later)"??

Problem was that it was (as usual) only the far nothern parts of the globe that saw this.... **Monday morning 3 am local time!**

Anonymous Coward

There is something very odd about this event in that there has been from the beginning varying reports on it. If Im not mistaken it was first expected to be right on target, they then turned around and said it would sail north, they said it would be weak, then said as big as 08 now as big as 03. I sort of detect the tactic of telling many stories that's always something that makes me go hmmm.

Quoting: **SSERAL**

Make it so blasting confusing that a majority of the HERD will just blow it off and go back to chewing their collective CUD! Hard to make the slaves keep on towing the line, if the get a whiff of

TRUE DOOM!

The truth is VERY elusive, these days!

I only heard something on radio news and they reported that the 'worst' of the storm missed us and went north. Seeing as how we're not living in the dark ages, I'd say that CNN's comment about it missing us is accurate. Did they say that no meters could read that something passed by? No. They had warned earlier in the day that if the worst of it hit us, stuff would happen (they listed several possible effects). None of them happened, so they then reported that it missed.

Please link any video or links on CNN's site to confirm that they said that no electrical effect could be found on any kind of meter. Somehow I doubt they did...

WOW!!! Now they are saying it's the largest in almost 9 years! That is certainly NEWS WORTHY... or you would think.

M8.7 Solar Flare and Earth Directed CME
01.23.12

UPDATE 01.24.12: The coronal mass ejection CME collided with Earth's magnetic field a little after 10 AM ET on January 24, 2012. The influx of particles from the CME amplified the solar radiation storm such that it is now considered the largest since October 2003. NOAA's Space Weather Prediction Center has categorized it as a "strong" -- or S3 (with S5 being the highest) -- storm. Solar radiation storms can affect satellite operations and short wave radio propagation, but cannot harm humans on Earth. Auroras may well be visible tonight at higher latitudes such as Michigan and Maine in the U.S., and perhaps even lower.

LINK: [[link to www.nasa.gov](http://www.nasa.gov)]

Quoting: **Freckles**

Interesting Freckles!!! I looked around and found this page just to find out what an M8.7 can do.

[[link to www.wsbt.com](http://www.wsbt.com)]

They can knock out power grids and make cell phones useless. But while he says this storm is big, it's not that big.

"Even though this is the largest storm that we've had in several years, it's still not at the magnitude that it would affect our everyday lives," Howk said. "The biggest impact will be on satellites that are up above the earth's magnetic field."

Howk adds that flight navigation may also be affected, so planes will be flying farther away from the north and south poles where the flares have the most impact.

Quoting: **Jujubees**

Thanks for posting this Jujubees! Very interesting info!!! I had heard that some airlines (Delta for one) were diverting flights because of it.) My son was to fly home from overseas tonight, and the Military nixed his travel plans (a week ago). I was upset about it last week, but now, after I see what the radiation can do, I am a very grateful Momma.

well, CNN announced this CME missed us, coming in north of us. The ACE DATA is Being manipulated. This is the ACE data for the last 24 hours. [[link to www.swpc.noaa.gov](http://www.swpc.noaa.gov)] Nothing interesting. The storm

PROOF is here at these two linkys. [[link to wdc.kugi.kyoto-u.ac.jp](http://wdc.kugi.kyoto-u.ac.jp)] Now this AE index measures energies coming inside of the magnetosphere to Weather satellites like the GOES satellites. As you see we are getting a significant storm. It was coming inside right about 1500 Utc after it being said it would arrive around 1440 utc.

This means our thugs are also manipulating the AE index data on Nict. [[link to www2.nict.go.jp](http://www2.nict.go.jp)]

The GOES magnetometer is PROOF also we are getting this CME [[link to www.n3kl.org](http://www.n3kl.org)]

Now Look also at haarp: [[link to www.haarp.alaska.edu](http://www.haarp.alaska.edu)] obviously something came in.

Proof also here: [[link to www.bartol.udel.edu](http://www.bartol.udel.edu)] the neutrons are all dropping out hugely, which occurs with these storms.

THEREFORE WHY IN THE FUCK DID THEY CHANGE THEIR WHOLE TUNE ON CNN WITH ALL THE ATTENTION GIVEN. CNN EVEN STATED THE NORTHERN LIGHTS WERE NOT FROM THIS CME THAT "MISSED US".

SOMETHING SMELLS ROTTEN. I HAVE BEEN FEELING THIS STORM AND WAS QUITE PERPLEXED BY THE NO DATA ON ACE FROM IT, PLUS ON AE INDEX ON NICT.

Quoting: **Nobody in Particular**

nice find OP :) this wasn't a CME of NO significance. right. ;)

At a height of 3-5 RE (RE =6378 km) almost all atmospheric particles are fully ionized. At this height, the motion of charged energetic particles may be approximated by the superposition of three types of motion: gyration about the main field, bounce along field lines and azimuthal drift in rings around the Earth. The drift of charged particles in the Earth's inner magnetic field produces the so-called ring-current. This current fills a doughnut-shaped volume around the equator and produces a magnetic field at the Earth's surface which reduces the strength of the surface field. In quiet conditions, the effect of ring current on the magnetic field is negligible but during magnetic storms the intensity of the ring current increases and produces significant disturbances.

The conductivity in the ionosphere is proportional to electron density which means that particle precipitation in the ionosphere leads to high conductivity. The plasma convection in the presence of Earth's magnetic field causes an electric field. Both the enhanced conductivity and the electric field cause large currents at altitudes between 90 and 150 km. Some of the consequences of these currents are joule heating of the ionospheric plasma and changes of the geomagnetic field on the ground. These changes of the geomagnetic field create the geomagnetically induced currents in the Earth and in conductors.

The three phases of a magnetic storm are

An increase of magnetic field lasting a few hours

A large magnetic depression over an interval of several hours

A slow recovery over the following few days

The initial phase is caused by the compression of the magnetosphere on the arrival of a burst of solar plasma. The main phase is due to a large increase in the ring current energy. The decay of this current will restore the magnetic field in its initial condition.

Could be to discredit amateur astronomers and sites like this one (with huge followings) in order to downplay not just this event, but future ones as well, because our confidence in ourselves and others to accurately interpret and predict catastrophic natural events would be shaken, lose followers, and bury the whole topic as one "better left to professionals," professionals who say "don't worry, everything is fine, it's normal!"

I think mostly, however, this is about downplaying events to water down any trends we think we see developing in nature, lest we catch on to the big picture and begin to think for ourselves, outside of the box.

Here's a solid source NIP. If you look now, we did get a KP6 storm this afternoon. If you will look at the second graph, the Electrons, you'll see the data dropout, it flatlines. This occurs because the data stream can be corrupted by the storm. This actually shows the total duration of the storm, over two days worth. What made this flare so unique, was it was a "TenFlare" [[link to solarham.com](#)] It may not have been an X, but what it put out was nasty bad, very much on the scale of a high X. Yes, Carrington bad. I'm quite relieved at this point to think it missed us, at least heavy brunt of it. Now, lets see if I get banned for the eighth time for this post. Good catch by the way, kudos.

This is NIP. I didn't log in on this other computer. well that site is for magnetometer readings around the world, **not** seismic activity. Obviously all the magnetometers showed activity at the same time the storm was apparent on the Goes magnetometer, and probably the haarp magnetometer, close to 15 utc. there is some spike on the site that happened on some of them, but not all. I have no idea about the spike.

well, CNN announced this CME missed us, coming in north of us. The ACE DATA is Being manipulated. This is the ACE data for the last 24 hours. [\[link to www.swpc.noaa.gov\]](http://www.swpc.noaa.gov) Nothing interesting. The storm

PROOF is here at these two linkys. [\[link to wdc.kugi.kyoto-u.ac.jp\]](http://wdc.kugi.kyoto-u.ac.jp) Now this AE index measures energies coming inside of the magnetosphere to Weather satellites like the GOES satellites. As you see we are getting a significant storm. It was coming inside right about 1500 Utc after it being said it would arrive around 1440 utc.

This means our thugs are also manipulating the AE index data on Nict. [\[link to www2.nict.go.jp\]](http://www2.nict.go.jp)

The GOES magnetometer is PROOF also we are getting this CME [\[link to www.n3kl.org\]](http://www.n3kl.org)

Now Look also at haarp: [\[link to www.haarp.alaska.edu\]](http://www.haarp.alaska.edu) obviously something came in.

Proof also here: [\[link to www.bartol.udel.edu\]](http://www.bartol.udel.edu) the neutrons are all dropping out hugely, which occurs with these storms.

THEREFORE WHY IN THE FUCK DID THEY CHANGE THEIR WHOLE TUNE ON CNN WITH ALL THE ATTENTION GIVEN. CNN EVEN STATED THE NORTHERN LIGHTS WERE NOT FROM THIS CME THAT "MISSED US".

SOMETHING SMELLS ROTTEN. I HAVE BEEN FEELING THIS STORM AND WAS QUITE PERPLEXED BY THE NO DATA ON ACE FROM IT, PLUS ON AE INDEX ON NICT.

Quoting: **Nobody in Particular**

Good work, NIP! 'They' can claim what they like, but, my physical signals have been rocking since last night!

Quoting: NiNzrez

I considered that but put together with the CNN coverage yesterday I ruled that out. Nobody else had that problem. SOHO didnt'. This was contrived, as they even mucked up the AE index on Nict, which is NOT related to the ACE satellite at all.

And believe this was NOT a case of CNN reporters not knowing what was going on. THAT WAS PLANNED AND THAT IS WHY SINCE MOST PEOPLE FOLLOW NICT, THEY PLAYED THAT GAME WITH ACE. This was planned and I know it was planned and apparently they did not consider the ruckus that might happen on the internet.

SWMS harness solar energy to modify the thermodynamics and composition of the earth's atmosphere.

The first subsystem includes a network of earth satellites called Satellite Engines (SEs) used to reflect solar energy and/or transform solar energy into other forms of energy beams discharged at specified locations. The media at these locations and the media through which the energy beams pass absorb these energies and change them into heat.

The second subsystem includes a large network of Remote Sensing Devices (RSDs). These sensors are used to measure local media compositions, dynamic parameters and thermodynamic properties.

Sensor measurements are fed back to the third subsystem, which includes a network of Ground Control Stations (GCSs). GCSs provide energy beam guidance by estimating each beam's characteristics and its aim point trajectory as functions of time.

Integration of these three subsystems establishes a sensor feedback energy beam guidance and control loop. SWMS's weather modification applications include alteration of precipitation, reclaiming of wasteland, reducing damage by bad weather, and improving environment. Its non-weather related applications include supplying concentrated energy to electricity generating stations (solar, wind and hydro), high latitude greenhouse farms, and solar powered airplanes.

Quoting: **Be With God**

CME's especially when the end times approach and the magnetosphere weakens do bother people and can cause some to be angry and do stupid shit, besides not feeling well. In fact all our various energies we are in will affect different people in a variety of ways. Although this is over simplified, most people can use this to start the process of understanding. Pretend you are a piece of vegetable in a big pot of soup. The atmosphere is the pot of soup. Each of you have mind systems that are in that soup. While your mind is non physical, you store what you know on electrons and photons. These are affected when the electrons, photons, protons, neutrons and all the other stuff in our atmosphere changes when the weather changes, solar storms come in, and every thing else that affects this "soup."

Your DNA also responds to the "soup." all is "one" and everything interacts and changes and adapts or doesn't adapt to changing energies.

This last CME was preceded by all those highly charged protons that you saw on SOHO, the "particle" storm. So whatever comes inside the magnetosphere into our atmosphere that you live in, will effects your own anatomy, and your own storage system of your mind, as all the energies will seek to balance each other.

Your mind particles are NOT immune to this. And as to the WAVE, it is full of very high energy electrons, they vibrate way beyond the vibratory rate of earth, and it would be sort of like mixing hot water and cold water together, you get warm water. These and the other particles which we are not releasing knowledge on, stimulate what might be called our cold low vibratory matter with this "hot" high vibratory matter, so that the overall matter vibrates then as a "warmer" rate. This is all part of the dimensional change going on, and since your body is matter, it is going to be affected too.

The guides/guardian angels are often putting spiritual pressure on people to stimulate them to move upward and this can also cause issues. Then add in all the massive social and cultural changes going on, and well you have a very big fast spoon stirring the pot of soup. Often changing directions.

You must effort to take this all in stride and grow from the experiences. Mind does not grow unless there is great challenge. This is simply the nature of evolution so seek the opportunity to do your best with it. This is a grand time to grow.

Quoting: **Tiago63**

Why is growth painful? It should be exciting. But the body changes themselves are uncomfortable and so are the issues with ones around us during these times. they seem strange to us and we are more than strange to them. Go time in a way to live and let live. A time to not have excessive attachments to anything or anybody. That does not mean to not to work together, hopefully this process will bring more of that. The ideas of what God is are certainly strange and confused on this world, and as man accepts actual truth, he will work together again. Or if conditions force him to work together again.
